Experiment: Prolog Program to Create a Database with Name and DOB

1. Aim

To write and execute a Prolog program to create a database containing persons' names and dates of birth (DOB), and retrieve the stored information using queries.

2. Software Required

- SWI-Prolog
- Windows operating system
- Notepad or any text editor

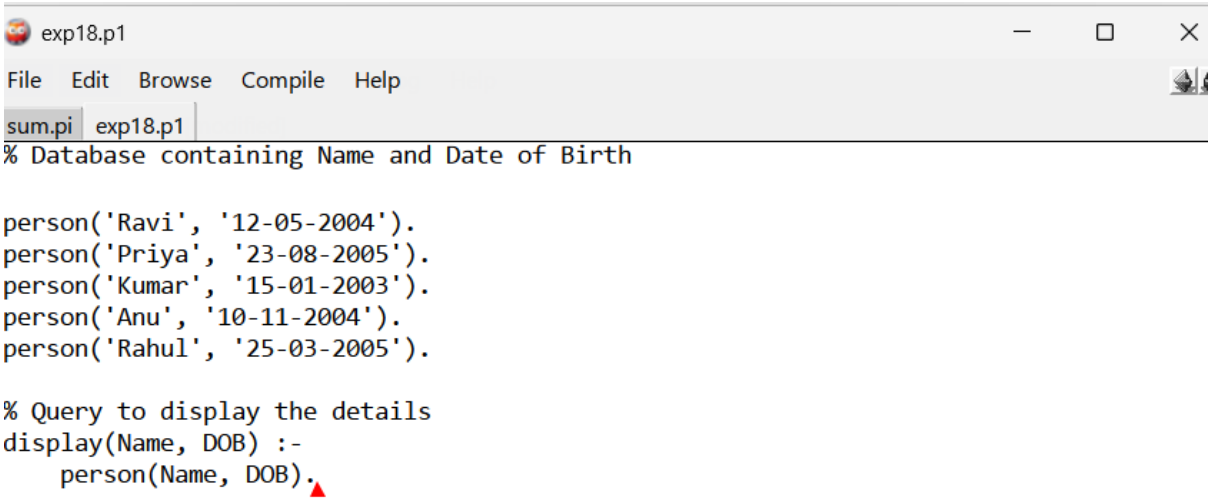

3. Program

Save the following program as exp18.pl.

```
% Database containing Name and Date of Birth

person('Ravi', '12-05-2004').
person('Priya', '23-08-2005').
person('Kumar', '15-01-2003').
person('Anu', '10-11-2004').
person('Rahul', '25-03-2005').

% Rule to display person details
display(Name, DOB) :-
    person(Name, DOB).
```

4. Procedure

1. Open Notepad and type the above program.
2. Save the file as exp18.pl in the AI folder.
3. Open SWI-Prolog.
4. Load the program using the command:

consult('C:/Users/yadal/OneDrive/Documents/AI/exp18.pl').

5. If the output is true., the program has loaded successfully.
6. Execute the following queries to retrieve the database records.

5. Queries and Output

```
ERROR: Re-run your program in debug mode (:- debug.) to get more detail.
12 ?- consult('C:/Users/yadal/OneDrive/Documents/ai/exp18.pl').
true.

12 ?- display(Name, DOB).
Name = 'Ravi',
DOB = '12-05-2004'
```

6. Result

Thus, a Prolog program was successfully written to create a database containing names and dates of birth. The stored information was retrieved using Prolog queries.
